Vintage & Historic
Safety Inspector's Test

Answer with as much detail as possible. Use your current Vintage & Historic Racing Division Bylaws as a general guide.

1. Describe the features to inspect when looking at helmets and life jackets.

2. When inspecting the 'kill switch', what elements would you look for?

3. What are the two most common types of shaft connections and what do you look for during an inspection?

4. Describe the process you would use while inspecting the steering system?

5. Why have a secondary throttle return spring at the carburetor?

6. How do you check the condition of the hull and what do you specifically look for during the inspection?

7. What do you look for when inspecting the lifting straps?

8. What do you look for when inspecting structural fasteners used to attach load bearing hardware (i.e. Skid fin, rudder bracket, lifting brackets, motor mounts, etc.).

9. Who has the overall authority to deem any equipment unfit for an exhibition run?
